

BAPPU-IRevo

BAPPU-IRevo was developed for fast, non-contact measurement of surfaces as a supplementary sensor for the BAPPUevo. Easily record the surface temperature of walls, floors and ceilings, live or moving parts.

BAPPU-IRevo ideally supplements the climate measurements at the workplace, because the surface temperature measurements can be used to record energetically unfavorable radiating surfaces. For example, the temperatures of poorly insulated external walls, which have a negative impact on comfort, can be measured. Measurements of the overall climate can also be examined more closely by including temperature measurements from radiating surfaces in the workplace analysis for comfort.

In addition, BAPPU-IR can be used to detect surfaces whose temperatures are below the dew point and are therefore susceptible to mold growth.

Features

- Precisely proven measurement technology
- fast, non-contact measurement
- Measure from a distance
- Complements the climate measurements
- Compatible with BAPPUevo

Measurement Range	Tolerance	Sensor	Resolution
Surface temperature	0...50 °C +/- 1 °C	IR-Sensor	0,1°C
	-20...75 °C +/- 1,5 °C	IR-Sensor	0,1°C

technical data subject to change

Technische Details:
l = 115 mm, cs = 12 mm, w = 14,5 gr.
